

Mobile App — Accounts & Payments Required from BGCC

SAMS — Subcontract Agreement Management System

Prepared for Bhatia General Contracting Co. (BGCC) — September 2026

To publish the SAMS mobile app (iPhone + Android) and send push notifications, BGCC needs to own the accounts below. **Everything must be registered in BGCC's company name** — never a personal account — so the app stays under BGCC's control if staff or the developer change.

1. Payments summary

#	Item	Cost	Frequency	Required?
1	Apple Developer Program (organization)	US \$99	Every year	Yes — for iPhone
2	Google Play Console (organization)	US \$25	One time	Yes — for Android
3	D-U-N-S company number	Free	One time	Yes — prerequisite for 1 and 2
4	Firebase (push notifications)	Free	—	Yes
5	Cloud build service (Expo EAS)	Free tier (US \$19/month only if BGCC wants faster/more builds)	Optional	No
6	Server upgrade (current VPS)	Existing plan is fine for notifications; upgrade only if PDF load grows	Optional	No

Total required: US \$124 in the first year (US \$99/year afterwards). Payment needs a company credit/debit card that supports international online payments (USD).

2. Accounts to create

2.1 D-U-N-S Number (do this first — it takes the longest)

- Free unique company ID, needed by Apple and Google to verify BGCC is a real organization.
- Request at <https://developer.apple.com/enroll/duns-lookup/> (BGCC may already have one — lookup is free).
- **Time: usually 5-14 days** if new. Needs: legal company name, trade licence, Dubai address, phone.

2.2 Apple Developer Program — US \$99/year

- Enroll as **Organization** at <https://developer.apple.com/programs/enroll/>
- Needs: D-U-N-S number, legal entity name, a **company email domain** (e.g. name@bgcc.ae — not Gmail), company website, and the enrolling person must have **legal authority to bind BGCC** (owner/director/GM).
- Apple will phone the company to verify. **Time: 2 days - 2 weeks.**
- After approval, BGCC adds the developer (our email) as an **App Manager / Admin** in App Store Connect — no password sharing.

2.3 Google Play Console — US \$25 one time

- Register as **Organization** at <https://play.google.com/console/signup>
- Needs: D-U-N-S number, company details, phone + email verification, ID of the account owner.
- **Time: 2-7 days** for verification.
- Then invite our developer as a user with **Release manager** permission.

2.4 Firebase (Google) — Free

- Create a project at <https://console.firebase.google.com> using BGCC's Google account (a shared company Google account, not an individual's).
- Add our developer as **Editor**. Push notifications on both platforms run through this; free at BGCC's volume (~15 users).

2.5 Expo account — Free (optional but recommended)

- <https://expo.dev> — lets us build the iPhone app in the cloud, so **no Mac is required**. Company-owned account, developer invited as member.

3. Items BGCC must provide (no cost)

Item	Why
Company email address for the developer accounts (e.g. apps@bgcc.ae)	Apple/Google send verification and store-review emails here
Public privacy policy web page URL	Mandatory for both stores (we can draft the text; BGCC publishes it on its website)
Support contact email/URL	Shown on the store listing
App name & logo (1024×1024 PNG)	Store listing / app icon. If none, we make a simple one
A demo login (a dedicated test reviewer account in SAMS)	Apple and Google reviewers need to sign in to approve the app
List of employees to receive the app (roles)	Confirms who gets notifications
Decision: MDM/internal-only or public store listing?	Public listing = any store visitor sees it (login still required). Private/unlisted distribution is possible but changes the accounts above

4. Timeline for the accounts

Step	Duration
D-U-N-S (if BGCC has none)	5–14 days
Apple + Google verification (in parallel)	2–14 days
Firebase / Expo	Same day

Start now — these approvals, not development, are usually the critical path. Development can proceed in parallel; the app can't be published until 2.2 and 2.3 are approved.

5. Who does what

Task	BGCC	Us (developer)
Get/look up D-U-N-S number	✓ (needs company legal documents)	Guide with the exact steps
Enroll in Apple Developer Program & pay \$99	✓ (needs company authority, card, phone verification call)	Prepare the checklist; cannot do this for them

Task	BGCC	Us (developer)
Register Google Play Console & pay \$25	✓ (company identity + owner ID verification)	Same
Create Firebase project (company Google account)	✓ create; invite us as Editor	Configure everything inside it: FCM, Android/iOS app registration, service-account key
Create Expo account	✓ create; invite us	Configure builds, signing certificates, push keys
Invite developer to App Store Connect / Play Console	✓	—
Publish privacy policy page	✓ on their website	Write the policy text
Provide demo login account for store reviewers	✓ approves	Create it in SAMS
Logo / app name / store description	✓ approves	Draft; generate icon and screenshots if none
Backend: device-token table, push hook beside every email send, read-only mobile endpoints	—	✓
Build the React Native app (login, lists with filters, detail, notification tap-through)	—	✓
Generate APNs key, upload to Firebase; Android signing keys	—	✓ (once invited to their accounts)
Build, upload to TestFlight/Play internal testing, store submission, answer store-review questions	—	✓ (BGCC only clicks final approval if they insist)
Test with real BGCC reviewers on phones	✓ few users	Support
Later: turn on EMAIL_PAUSED=true after push is proven	✓ decision	✓ VPS config

In short: BGCC owns identity, payments and legal sign-off; we do all configuration, code, builds and submissions once invited.

6. What is NOT needed

- No separate SMS or push-notification vendor (Firebase covers both platforms).
- No new server, database or domain — the app uses the existing SAMS system.
- No monthly fee for the app itself.
